

SAI HRUSHIK KOPPULA

973-650-8134 | koppulas2@montclair.edu | Jersey City, NJ | [linkedin.com/in/sai-hrushik-koppula](https://www.linkedin.com/in/sai-hrushik-koppula)

SUMMARY

Graduate computer science student skilled in cloud computing, RESTful APIs, microservices, Java, Spring Boot, AWS, and Azure. Experienced in building scalable, secure backend applications and collaborating within technical teams.

Areas of Expertise: Backend Development | REST API Design | Java & Spring Boot | Cloud Microservices | Azure & AWS | Database Management

EDUCATION

Montclair State University

Master of Science in Computer Science; GPA: 3.6/4.0

May 2026

Montclair, NJ

Sreenidhi Institute of Science and Technology

Bachelor of Computer Science Engineering; GPA: 7.0/10.0

May 2024

Ghatkesar, Telangana

TECHNICAL SKILLS

Languages & Frameworks: Python, JavaScript, PHP, React, Django, HTML, CSS, C++, C#

Databases: MySQL, PostgreSQL, FAISS, ChromaDB

Machine Learning Libraries: NumPy, Scikit-learn, Pandas, TensorFlow, PyTorch, Hugging Face, LangChain, OpenAI API

Developer Tools: Git/GitHub, VS Code, Jupyter Notebook, Android Studio, Docker, Postman

EXPERIENCE

Amazon Web Services (AWS) | Cloud Computing Intern

Aug 2022 – Nov 2022

- Configured and managed AWS VPC and S3 to implement secure and scalable cloud solutions, supporting reliable application deployment and data storage.

PROJECTS

Blood Type Classification Web App | Java, Spring Boot, React, Django

- Developed a backend-centric application architecture focused on service-based communication and efficient data processing. Designed RESTful APIs for client-server interaction, data validation, and categorization using Java and Spring Boot.
- Applied modular service design and object-oriented programming principles to enable scalable backend communication between frontend and server components.

Dual-Tone Multi-Frequency (DTMF) Robot | Raspberry Pi, Python

- Built a command-driven robotic control system using real-time signal processing and modular control logic to convert input signals into physical movement commands. Demonstrated strong understanding of event-driven systems, hardware–software integration, and scalable control architecture design.

Car Driving Game – Multi-Perspective Level-Based System | C#, Unity

- Developed a 3D car driving game using C# and Unity with first-person and third-person camera perspectives. Designed a minimalist UI and structured multiple progressive levels with increasing difficulty.
- Applied object-oriented programming, game state management, and event-driven logic to manage player controls, camera switching, and level transitions effectively.

ACHIEVEMENTS & CERTIFICATIONS

- Winner – IT Fest, built a DTMF Robot (10th Grade).
